IMPORTANT

Since the powder charge is the most critical portion of a reloaded cartridge, it is very important that you take a few minutes to read these instructions carefully to gain an understanding of the use of the three point system before attempting to weigh powder charges.
CAUTION

Once the handle is in position, hang the wire hanger on the handle. The end loop should match the pivot notch. Both ends of the loop must be parallel to the beam. In order to operate properly, the end loop must not be bent or twisted when unpacking.

UNPACKING AND SETUP

Your "5 • 0 • 5" is now ready for use.
About Your RCBS Model 5-0.56
To increase weight values, move the position to the left and line it up with the zero graduation.

Always make sure the grader is seated in the notch.

To zero the middle pose, move it to the position where the grader's needle is aligned with the zero graduation.

Always use the smaller pose for weight values between 1 grain.

Always use the larger pose for weight values greater than 1 grain.

The principle of the middle position is the same as for the large pose.

Do not attempt to set the larger pose at any position except firmly seated in a notch. Always use the smaller pose for weight values between 1 grain.

The principle of the larger pose consists of an equatorial adjustment.

How to use the large pose (500 grain)
The illustration is a setting of 7 grains.

To weigh in unknown, suit as skilful of chance from a powder.

HOW TO WEIGH

Weighing...

The magnetic damping is applied at all loads and will speed up the scale that the damper can register in.

The damper magnet is positioned inside the beam on both sides of the beam.

The damper magnet is operated by the weighing system.

The scale is equipped with magnetic damping which causes

YOUR "5.0" SCALE IS EQUIPPED WITH MAGNETIC DAMPING WHICH CAUSES

HOW TO BALANCE THE SCALE

Do not attempt to set the small pointer at any position except sealed in a

scale.

HOW TO CLEAN YOUR SCALE

To keep the scale clean at all times and to prevent damage.

HOW TO STORAGE

Store the scale in a dry, cool place.

HOW TO ZERO THE BALANCE

Do not attempt to set the small pointer at any position except sealed in a

scale.
Funnel:
Prevents powder from sticking, square tip stops spills around case mouths, anti-static treatment specially designed drip lip prevents powder from rolling, rubberized free fitting cap.
